

The Impacts of Labor Market Policies on Job Search Behavior and Post-Unemployment Job Quality

Simen Gaure, Knut Røed and Lars Westlie

Complete estimation results for the alternative model without unobserved heterogeneity

This is a downloadable appendix to the paper “The Impacts of Labor Market Policies on Job Search Behavior and Post-Unemployment Job Quality”. The following table presents the complete estimation results of the alternative model without unobserved heterogeneity discussed in section 5.4 in the paper. Complete variable description is provided in a separate downloadable file. The numbers at the end of each variable indicate the event (destination) in question: employment (_1), education (_2), another benefit (_3), ALMP (_4), employment termination (_5) and earnings (_6).

Not all variables are included in all hazard rates. For instance, the model does not allow participants in ALMP to enter into a new program while already participating. Therefore, the “on ALMP” dummies are excluded from this hazard rate. Persons older than 34 years old are assumed to have a zero risk of entering education (a very few do, and these are treated as censored).

Complete estimation results for the alternative model
without unobserved heterogeneity

Employment
