The Impacts of Labor Market Policies on Job Search Behavior and Post-Unemployment Job Quality

Simen Gaure, Knut Røed and Lars Westlie

Complete estimation results for the model reported in the paper

This is a downloadable appendix to the paper "The Impacts of Labor Market Policies on Job Search Behavior and Post-Unemployment Job Quality". The following table presents the complete estimation results of the main model presented in the paper. Complete variable description is provided in a separate downloadable file. The numbers at the end of each variable indicate the event (destination) in question: employment (_1), education (_2), another benefit (_3), ALMP (_4), employment termination (_5) and earnings (_6).

Not all variables are included in all hazard rates. For instance, the model does not allow participants in ALMP to enter into a new program while already participating. Therefore, the "on ALMP" dummies are excluded from this hazard rate. Persons older than 34 years old are assumed to have a zero risk of entering education (a very few do, and these are treated as censored).

The complete estimation results of the original model			
Employment
