Own hard and soft indicators

The centre is requested to come up with their own hard and soft indicators (quantitative and qualitative) in addition to the sub-items in 3-6. These should be the indicators that they find relevant to give a good documentation of the results of the centre.

Governmental reports and expert committees

Governmental reports such as Official Norwegian Reports (NOU) are important for policy making in Norway. CREE researchers constantly contribute to such reports as members of commissions and expert groups. Some recent examples are the green tax commission that was established in 2014 and where three out of seven experts are CREE researchers (Bye, Hoel and Rosendahl), the expert group on investments in coal and petroleum companies that presented their report in December 2014 (Hoel), the expert commission on the value of ecosystem services that presented their report in 2013 – NOU 2013:10 (Aslaksen and Brekke), and the expert committee on cost benefit analyses that presented their report in 2012 NOU 2012:16 (Bye and Nyborg).

Participations in public hearings

CREE researchers participate in public hearings at the Parliament or at the ministries. Recent examples of this is the hearing on Norwegian climate targets before the Paris climate negotiations in the Ministry of Climate and Environment in January 2015, the hearing about the Norwegian position on the proposed EU framework for climate and energy policies towards 2030 that took place in the Ministry of Foreign Affairs in 2014, and the hearing in the Parliament on Norwegian climate policy in 2012. In addition to this, we also write statements on several governmental reports and research programs at the Research Council of Norway.
